THE SCALE OF THE CHALLENGE

FIFA 2026 is the largest sporting event in human history.

5M+

fans across
16 US/Canada/Mexico
venues

104

nations
simultaneously
attending

48

competing
nations —
50+ languages

\$11B

projected
economic
impact

The Pain Points — Without AI:

 **Navigation
chaos:**

Fans lost in 80,000-seat stadiums with no real-time guidance in their language

 **Accessibility
gaps:**

Disabled fans have no AI companion to guide them through accessible routes and facilities

 **Crowd crushes:**

Dangerous bottlenecks form at gates, concessions, and exits with no predictive system

 **Language
barriers:**

Staff cannot communicate with fans from 104 nations — critical safety info gets lost

THE SOLUTION

NEXUS 2026: One platform. Every stakeholder. Every moment.

A unified GenAI layer deployed across all 16 venues — serving fans, staff, volunteers and organizers simultaneously with real-time intelligence, in any language, on any device.

FanAssist AI

Multilingual AI chatbot for 50+ languages.
Navigation, food, transport, emergency info
— all conversational.

CrowdFlow

Real-time crowd density heatmaps with
predictive AI routing. Prevents bottlenecks
before they form.

AccessFirst

Dedicated AI companion for disabled fans.
Accessible routes, seating help, priority
queuing assistance.

StaffCopilot

AI ops assistant for 20,000+ volunteers. Real-time briefings, incident alerts, task management.

GreenOps

Sustainability intelligence: energy, waste,
transport emissions tracking with AI
optimization nudges.

CommandBridge

Organizer decision dashboard. Real-time alerts, crowd predictions, resource allocation, incident response.

TECHNICAL ARCHITECTURE

Modular GenAI stack — built to scale to 5 million concurrent users.

Key Innovation: Edge-first architecture ensures offline fallback. All critical AI responses cached at venue level — system works even if cloud connectivity drops mid-match.

Every fan. Every language. Every moment.

FanAssist AI

Multilingual AI chatbot deployed on fan smartphones, stadium screens, and wearable wristbands

- 50+ language real-time translation (voice + text)
- Indoor AR navigation — 'Take me to Gate 14B'
- Queue wait times for food, toilets, merchandise
- Personalized match alerts and seat upgrades
- Emergency evacuation guidance in user's language
- Lost & found AI matching with photo upload

CrowdFlow

Real-time crowd intelligence using IoT sensors, computer vision, and predictive AI modeling

- Live density heatmap — 500+ sensor zones per venue
- Bottleneck prediction 8-12 minutes in advance
- AI gate routing — nudges fans to less busy entrances
- Dynamic digital signage updates (automatic rerouting)
- Stampede risk scoring with automatic staff alerts
- Post-match exit flow optimization — 40% faster dispersal

No fan left behind. Every volunteer empowered.

AccessFirst

FIFA's first dedicated AI accessibility companion — making the World Cup truly inclusive for all 5 million fans

- Wheelchair-optimised routing (ramp, lift-only paths)
- Sign language video AI responses (ASL, BSL, ISL)
- Audio descriptions of match action for blind fans
- Priority queue alerts via vibration on wristband
- Companion seating finder and accessible toilet locator
- Emergency evacuation — accessible-route priority guidance

StaffCopilot

AI operations assistant for 20,000+ FIFA volunteers across all venues — real-time, multilingual, context-aware

- Morning AI briefing — venue-specific, match-day priorities
- Instant incident reporting via voice (auto-translated)
- Real-time crowd alert push notifications by zone
- 'Ask anything' AI — protocols, FAQs, medical procedures
- Shift handover summaries auto-generated by AI
- Multilingual fan communication script suggestions

Real-time decision support for organizers. Real-time planet care.

CommandBridge

Live organizer command centre — AI synthesises 500+ data streams into actionable decisions

-  Live crowd risk score per venue zone (0-100)
-  AI-generated incident response protocols
-  Resource allocation suggestions (staff, ambulance, police)
-  Natural language querying — 'What's the biggest risk at MetLife right now?'
-  Predictive delays: transport, bottlenecks, weather impact
-  Cross-venue intelligence — compare all 16 stadiums live

GreenOps

FIFA 2026's sustainability AI — tracking, optimising, and reporting environmental impact in real time

-  Real-time energy consumption per venue (kWh + CO₂)
-  Waste sorting AI via camera — nudges correct bin usage
-  Fan transport carbon footprint calculator (per ticket)
-  AI optimises food vendor restocking (cuts waste 30%)
-  Renewable energy usage live dashboard for media
-  Post-event sustainability report — auto-generated by AI

PROJECTED IMPACT

Measurable outcomes across all six pillars.

40%

**Faster post-match
exit dispersal**

CrowdFlow predictive routing

60%

**Reduction in
staff comms errors**

StaffCopilot AI briefings

50+

**Languages served
instantly by AI**

FanAssist real-time translation

30%

**Less food waste
across all venues**

GreenOps AI restocking

8min

**Advance warning
for crowd bottlenecks**

CrowdFlow prediction window

100%

**Accessible route
coverage — all venues**

AccessFirst AI companion

THE VISION

NEXUS doesn't just manage a tournament.

It elevates it.

5 million fans. 104 nations. 50+ languages. 64 matches. 16 venues.

One GenAI platform to serve them all — safely, inclusively, sustainably.
